At Bayer AG in Frankfurt am Main, the VXT458 electric transporter is used in the internal factory traffic of one of the largest chemical and pharmaceutical sites in Europe. The vehicle's tasks are the transportation of the daily mail in the Hoechst industrial park as well as courier trips to connect two nearby operating sites with each other. This means that the electric transporter replaces the previous diesel combustion vehicle and ensures more electric mobility in factory traffic.

Factory Frankfurt am Main

Sustainability has many facets. In addition to electromobility, an important one concerns food and its distribution. This is where the "Tafel" associations come in: they collect surplus food and distribute it to financially disadvantaged people. The "Tafel Drensteinfurt e.V" supports socially and economically disadvantaged residents of the region near Münster and uses an 458 Pickup L to transport the goods.

Food supply Drensteinfurt

Guests at the "Van der Valk" resort in Linstow can marvel at individually customized VXT458 electric vans. Four VXT458 Box XL vehicles are on the roads of the holiday complex at the Baltic Sea. These were converted into a mobile laundry storage by dividing the box body vertically and equipping it with compartments so that laundry can be transported quickly and easily.

VXT 458 Pickup | References

In addition to many businesses and municipalities, large industrial groups also have electric vehicles of the VXT in their fleet. The international service company "Arvato Supply Chain Solutions " uses an VXT 458 Pickup in its branch in Landsberg near Halle (Saale). Thanks to its emission-free drive, the VXT 458 Pickup is allowed to drive in the factory halls and supports the building services in terms of maintenance and repairs in the logistics center.

Maintenance Halle an der Saale

A company that, like VXT relies on individual transport solutions for customers is "Allgemeine Bremer Verpackungen" ("General Bremen packaging"). The company has been manufacturing industrial export packaging for many years. The company decided to add an VXT458 Pickup XL to its delivery fleet. The vehicle drives 50 kilometers a day to make deliveries in the Bremen area when none of the seven Mercedes-Benz Sprinters in the fleet are needed.

Delivery Bremen

In addition to many companies, more and more communities are discovering the agile and practical VXT transport vehicles. The municipal utilities of Demmin have integrated an VXT458 with a tipper body and four-part lattice box into their fleet. The commune has dedicated itself to cut the CO2 emissions and put a biogas plant into operation. The environmentally friendly electric transporter fits perfectly with the future-oriented image.

VXT Motors Press reviews

"VXT Motors - Delivery Electric expanded his model range via the electric VXT345 cargo moped (45 km/h). It can be ordered with a pickup or box body in three sizes each." **

"It doesn't always have to be a large transporter: the VXT345 can load a lot for its shortness." **

"In Italy, small three-wheeled utility vehicles have long been an integral part of the logistics chain. The low space requirements and high cargo load make it ideal for urban delivery services, and the electric drive is future-proof." **

"This is Germany's cheapest electric car!" **

Neue Presse

"No noise, no emissions: the VXT458 is the smallest multifunctional transporter with road approval and electric drive." **

"This small transporter from Leipzig is supposed to make cities cleaner. For craft businesses and transport companies, the bans of Diesel vehicles are a problem. A small truck made in Germany can help in this regard." **

"The German manufacturer VXT Motors offers with the VXT 458 the 'smallest electric transport vehicle with road approval'. The vehicle is cheap, the equipment is simple." **

"A small transporter, specially adjusted to the needs of smaller craft businesses, is currently only offered by VXT Motors. VXT is the Swiss Army Knife among transport vehicles." **
